Education

Ajay Kumar Garg Engineering College

Bachelor of Technology in Computer Science (8.55 CGPA)

Nov. 2022 – Jun 2026

Ghaziabad, Uttar Pradesh

Experience

Kim CC

Jul. 2026 – Present

Software Engineer

Bengaluru, India

- Built **Persona training** and **intent-scoped response strategies** end to end: **LLM generation pipelines**, CRUD APIs, and full create/validation UIs, consumed by the Python AI engine so non-engineers control brand voice and how the AI answers each intent.
- Built the **AI Operating Settings** surface: per-intent filtering toggles over a ported **intent classifier**, all **9 system guardrails** configurable per account with policy assembled from the database, auto thresholds, and a **confidence check** and **stale-response gate** deciding when the AI answers versus escalates.
- Delivered **multi-brand support** across the platform for enterprise accounts running several brands in one workspace: brand management with inbox assignment, server-to-server **normalizer APIs** resolving each ticket to a brand, and brand-scoped analytics and agent scorecards.
- Designed a **6-layer eval cascade** for the AI engine with **LLM-as-judge** scoring and **Langfuse** telemetry, turning response quality into per-layer metrics that pinpoint which stage produced a bad answer.
- Instrumented the engine **feature by feature** with metrics across guardrails, knowledge base, rule-engine workers, and tool runners, and defined the **alert rules** on top, so each feature alarms on its own failure modes.
- Surfaced the AI's **thinking steps** as live progress events from the Python engine through to the agent UI, and added **visitor page-trail tracking** to live chat so agents see which pages a customer browsed before opening a ticket.
- Integrated **Skio**, **Trustpilot**, **Klaviyo**, **Yotpo**, **Reviews.io**, **USPS**, **ShipStation**, **ShipBob**, and **Google Sheets** into the agent tool layer.
- Improved the **Pulse analytics** product with sentiment and tag filters, background **CSV exports**, and **LLM-analysed CX reports** emailed as PDF.

Kim CC

Nov. 2025 – Jun. 2026

AI Engineering Intern

Bengaluru, India

- Improved AI response accuracy and workflow coverage from **18% to 60%** by redesigning extraction logic, retrieval workflows, validation layers, and fallback handling.
- Implemented **hybrid product search** using **Qdrant** dense+sparse retrieval for Shopify product discovery, improving retrieval accuracy from **20% to 100%**.
- Developed a **graph-based workflow execution engine** for orchestrating multi-step AI pipelines, tool calls, routing logic, and asynchronous task execution.
- Shipped **webhook ingestion pipelines** for **Zoho** and **Gorgias** plus a **Zoho Desk extension**, letting agents generate, review, and send AI-assisted replies inside the helpdesk UI.

Daily Wellness AI

Mar. 2025 – Aug. 2025

AI Engineering Intern

Remote, San Diego, CA

- Developed an **AI assessment tool** using **OpenAI SDK** with **Structured Output** to evaluate free-form Q&A and recommend tailored service packages.
- Reduced agent processing latency from **90s to 30s** with **threading** for concurrent tool calls, and orchestrated deployment on **FastAPI**, **Docker**, and **AWS EC2**, compressing images from **1 GB to 158 MB** with **CI/CD**.

GST Magic AI

Aug. 2025 – Sep. 2025

Freelance AI Engineer

Remote

- Engineered a **document management tool** for **GST PDFs** with embedded metadata and status tracking, and deployed a **RAG-based assistant** on the **Pinecone Assistant API**.

Projects

Julius AI (AI Interviewer) | *Next.js, Node.js, MongoDB, Redis*

[GitHub](#) | [Demo](#)

- Developed an **AI voice agent** conducting **6-stage** conversational interviews followed by **AI-curated coding challenges** and automated hiring recommendations, at **800ms** end-to-end latency over **WebSockets** with **Deepgram STT** and **ElevenLabs TTS**.

Technical Skills

Languages: Python, TypeScript, JavaScript, Go, SQL, HTML, CSS

Technologies/Frameworks: PyTorch, TensorFlow, LangChain, Next.js, Node.js, FastAPI, gRPC, Docker, AWS

Databases: PostgreSQL, MySQL, MongoDB, Redis, Pinecone, FAISS, Qdrant

Domain Expertise: Machine Learning, Deep Learning, NLP, Retrieval-Augmented Generation, AI Agents

Achievements

Runner-up in an **All-India hackathon (Sparrowthon)** with over **350 participants**
